-\$255

Start: \$1095 End: \$840

RULES

✗ 20/20 rule — let loss exceed 20% of contract premium

✗ 15M correction was not complete before 1M entry

✓ Manually closed options — saved \$59 vs letting expire

✓ One entry only, then waited — no re-entries

KEY LESSON

"The 15M correction MUST be complete before dropping to 1M for entry. No exceptions."

PSYCHOLOGY

Options fits my psychology better than futures. With futures I re-enter multiple times — FOMO and revenge trading on loop. With options I enter once and wait. Seeing % down instead of ticks makes the loss real and harder to rationalize. The defined max loss removes the choice to blow past risk.

Every loss logged is a loss learned.
